KIMEX SUPPORTS YOU IN YOUR DYNAMIC DISPLAY PROJECTS

At first glance, dynamic display screens look a lot like the high-tech TVs in our living rooms. However, they are designed to meet very specific needs in much more demanding conditions. Colour management, image quality, brightness, integrated media player, outdoors or indoors... the choice of a dynamic display screen can sometimes be a real challenge for users who are not familiar with the technological details specific to this market segment. KIMEX will advise and support you in your choice of professional monitors.

DISPLAYS THAT MEET YOUR NEEDS

Brightness

The choice of brightness will depend on where you want to install your professional monitors. The intensity of the light in your monitor will depend on the surrounding lighting. Below, you will find an overview of the different light intensities according to uses. If you are still unsure or have any questions, please feel free to ask our sales department for advice.

Light Intensity	Use
Approx. 350-450 cd/m ²	Normal lighting environment. Places where you can control the lighting.
500 cd/m ²	Very brightly lit environment. Places with a lit interior without control of the lighting.
700-1000 cd/m ²	Very bright environment. For example: Reception areas, shopping centres, outside-facing windows (but not in direct sunlight).
2500 cd/m ²	Extremely bright environment. For example: outdoor-facing windows in full sun.

Use

Regarding the time of use, there are 2 types of professional dynamic display monitors: 16/7 and 24/7. 16/7 monitors are designed to operate 16 hours a day, 7 days a week, which corresponds to the maximum opening hours of many stores and businesses. The display can therefore operate every day, including weekends and public holidays and be switched off at night. 24/7 can operate continuously 24/7. Indispensable when the display must remain on at night.

Resolution

Resolution equals the number of pixels that the image displays. The more pixels there are, the sharper the image. Generally speaking, for a professional monitor for public use of up to 55 inches, a Full HD high resolution (1920 x 1080p) is sufficient. The term UHD is often used as a synonym for 4K. Ultra HD is the umbrella term for all resolutions with a high number of pixels. 4K is designed for monitors of 55" and larger, where the distance between monitor and the viewer is smaller.

SoC

A system on a chip (SoC) is an integrated circuit that brings together the main components of a computer on a single electronic chip. All KIMEX professional monitors are equipped with an SoC.

Connections

Among the most common connections for professional screens are HDMI, DVI, Display Port and VGA. The most widely used is the HDMI port. Generally speaking, professional 4K screens are designed with an HDMI port. It is often indicated separately. For 4K display, the HDMI port must support the HDCP 2.2 standard, which is the case with connections indicated separately. Next to the image ports, there are usually USB ports, a 3.5mm audio input, LAN ports, and RS232 ports for connection with control systems (e.g. computers) and to allow internet access. Some professional screens also have a WLAN function (integrated or optional).

SMART HOTEL TV

kimex

167-3200 Smart TV Hotel 32" Pro One

Technical specifications

CRESTRON CONNECTED

Crestron Connected certification complements KIMEX's presence with inside the corporate, retail, government, better training and hospitality markets, all of which use expert AV controls. As those sectors hold to evolve with growing necessities for simple-to-use merchandise, seamless integration, dependable answers and community connectivity.

32"

16/7 / 24/7

FULL HD

350 cd/m² / 450cd/m²

FEATURES

> USB Content Scheduling

USB content scheduling optimizes the playback and operation of content efficiently while configuring playback times on a daily and weekly basis. You can clone and distribute the scheduling configuration to other screens via a USB plug-in.

> SoC

HTML5-based applications can be developed to run directly in the SoC platform of our screens. The screens are capable of running in online or offline mode.

> USB Autoplay

USB autoplay makes playing content simple and effortless. Simply plug in your USB memory containing images or video files and the display can start playing automatically.

> Playlist Creation

Playlists can be easily created by the user, allowing up to 4 different combinations of images and videos in a specific order, which can then be selected and played at the desired time, using the built-in scheduler.

> Screen linking

This monitor can broadcast the content received (to other screens) by using the video inputs/outputs of the screens connected to it. This configuration makes it possible to create a serial connection and to use our monitors as video image walls.

> Screen control

Our integrated SoC (System on a Chip) allows users to control our screens by RS232 link in a local network. You can alter/adjust the volume, activate/deactivate the monitor, schedule the display of content, define an internet link to display or even send a wide choice of commands in real time.

> Programmer

The built-in planner is one of the many useful features included. The planner allows you to plan daily routines when the screen is on or off, as well as the selection of different sources or USB playlists.

> Signal relay

Our screens have "no signal" protection. If the source is disconnected, the screen will display your personalised banner or will search for any other signal from video sources. Since a blank screen is the worst case scenario for advertising, switching is one of the essential features of our signage screens.

> Unlimited operability

The screen panels used for this series are designed to operate 16/7/d. The series has a brightness level of 350cd/m² or 450cd/m² suitable for indoor environments.

> Pixel Shifting

Our integrated SoC is designed to avoid the marking of your display screen caused by showing a still image for an extended period of time. When this function is activated, the pixels on the screen move imperceptibly at regular intervals without disturbing your audience's viewing experience.

> Source switch

You can select any source when you turn your screen on. The display can also be switched to any other signal source using programming or automatic switching scenarios, to ensure that the best possible experience is always offered to your audience.

> Auto play

The automatic display of a link or an application, based on the HTML5 data format, when our products are turned on is facilitated by our integrated SoC (System on a Chip) media player. You can display a resource online or offline, allowing your customers to use their own applications.

350 cd/m²

FEATURES

> Embedded CMS

The integrated content management system allows easy access to your media library, templates and planner. Using simple and intuitive menus and layout options, it enables easy content management for small businesses.

> URL Startup

Along with several startup options, it is possible to add a specific URL that will be opened automatically when the browser is launched or displayed.

> Screen linking

This monitor can broadcast the content received (to other screens) by using the video inputs/outputs of the screens connected to it. This configuration makes it possible to create a serial connection and to use our monitors as video image walls.

> HDR10 & 4K HDMI @60Hz

Screens supporting HDR10 allow HDR-based content to be displayed, resulting in a brighter and more dynamic image. This is further enhanced with support of 4K 60Hz, allowing the presentation of super crisp, fluid video content.

> Programmer

The built-in planner is one of the many useful features included. The planner allows you to plan daily routines when the screen is on or off, as well as the selection of different sources or USB playlists.

> Screen control

Our integrated SoC (System on a Chip) allows users to control our screens by RS232 link in a local network. You can alter/adjust the volume, activate/deactivate the monitor, schedule the display of content, define an internet link to display or even send a wide choice of commands in real time.

FEATURES

> Display Control over RS232 and LAN

Our platform allows users to control their screens, using a wide range of commands via a local area network or direct RS232 serial connection.

> Wireless Display

Using the Microsoft Wireless screen Adapter or Android screen-sharing functions on Windows and Android devices, you can mirror the display on the monitor using integrated wireless screen capabilities without using external devices or cables.

> Menu Lock

The menu lock feature allows you to lock the display menus after installation to prevent any changes or access when in use in a public area.

> SoC

HTML5-based applications can be developed to run directly in the SoC platform of our screens. The screens are capable of running in online or offline mode.

> Auto play

The automatic display of a link or an application, based on the HTML5 data format, when our products are turned on is facilitated by our integrated SoC (System on a Chip) media player. You can display a resource online or offline, allowing your customers to use their own applications.

> Embedded CMS

The integrated content management system allows easy access to your media library, templates and planner. Using simple and intuitive menus and layout options, it enables easy content management for small businesses.

> HDR10 & 4K HDMI @60Hz

Screens supporting HDR10 allow HDR-based content to be displayed, resulting in a brighter and more dynamic image. This is further enhanced with support of 4K 60Hz, allowing the presentation of super crisp, fluid video content.

> DAP (Dolby Audio Processing) Technology>

Our screens deliver full sound performance using the latest DAP technology by Dolby. With integrated DAP technology, superior sound performance is achieved through intelligent audio equalisation, dialogue enhancements and surround sound upmixing.

> Programmer

The built-in planner is one of the many useful features included. The planner allows you to plan daily routines when the screen is on or off, as well as the selection of different sources or USB playlists.

> Pixel Shifting

Our integrated SoC is designed to avoid the marking of your display screen caused by showing a still image for an extended period of time. When this function is activated, the pixels on the screen move imperceptibly at regular intervals without disturbing your audience's viewing experience.

> Source switch

You can select any source when you turn your screen on. The display can also be switched to any other signal source using programming or automatic switching scenarios, to ensure that the best possible experience is always offered to your audience.

> HDMI Wake Up

To maximise the user experience when using external video devices such as media players, screen controllers or PCs, all of our devices come with the HDMI wake-up function, ready to turn the screen on/off by simply plugging/unplugging the HDMI cable.

> Screen linking

This monitor can broadcast the content received (to other screens) by using the video inputs/outputs of the screens connected to it. This configuration makes it possible to create a serial connection and to use our monitors as video image walls.

FEATURES

> SDM Ready

With the change comes for OPS and Display computing cards, QM series also give customer to choose between OPS or SDM module. You can order your product either as OPS ready or SDM ready.

> Pixel Shifting

The Pixel Shifting function can be activated to reduce the potential risk of the image freezing when static content is displayed over long periods of time. The function periodically shifts the image on the screen, without interfering with the viewing experience.

> HDMI Wake Up

To maximise the user experience when using external video devices such as media players, screen controllers or PCs, all of our devices come with the HDMI wake-up function, ready to turn the screen on/off by simply plugging/unplugging the HDMI cable.

> Programmer

The built-in planner is one of the many useful features included. The planner allows you to plan daily routines when the screen is on or off, as well as the selection of different sources or USB playlists.

> Slim design

The screens in this series have an ultra-slim bezel, leaving plenty of room for the content displayed on the screen to attract the attention of your audience. This series also offers the shallowest depth of all of our Professional Display Solutions.

> Screen linking

This monitor can broadcast the content received (to other screens) by using the video inputs/outputs of the screens connected to it. This configuration makes it possible to create a serial connection and to use our monitors as video image walls.

> Connection of External Devices

All of our monitors are equipped with HDMI CEC (Consumer Electronics Control) sockets to provide you with maximum convenience when using them. With a single move, you can set up and control your video-conferencing, screen sharing or external PC systems connected to the HDMI port.

> Operation Time Support

Professional Panels used with this series are quality confirmed to operate 24 hours a day without any issues. Upon this, the series come with 500 Nits brightness levels suitable for medial indoor environment.

> Source switch

You can select any source when you turn your screen on. The display can also be switched to any other signal source using programming or automatic switching scenarios, to ensure that the best possible experience is always offered to your audience.

> Securing the USB support

A screw-on protective cover (located on the back of the device) protects the USB key, broadcasting content to the screen, from any malicious tampering.

> Built-in Connectivity

This series features wired and wireless connectivity such as embedded WiFi and Bluetooth. Due to the wireless capabilities, the displays can easily gather its content without any external device. Moreover, WiFi allows screen sharing to be enjoyed with Miracast.

> Screen control

Our integrated SoC (System on a Chip) allows users to control our screens by RS232 link in a local network. You can alter/adjust the volume, activate/deactivate the monitor, schedule the display of content, define an internet link to display or even send a wide choice of commands in real time.

> Signal relay

Our SoC software offers an integrated solution to ensure that a still image indicating "No signal" is never displayed. For example, if the USB device is unplugged even though you have configured it to display a USB source, the screen will then display your personalised banner or search for any available signal from other sources (HDMI, Display Port, etc.).

> USB Auto Play

Our integrated SoC gives you the option of activating the USB Auto Play function, allowing you to automatically display photo or video content from your USB drive on the screen with no need to worry about anything else.

> Auto play

The automatic display of a link or an application, based on the HTML5 data format, when our products are turned on is facilitated by our integrated SoC (System on a Chip) media player. You can display a resource online or offline, allowing your customers to use their own applications.

> HDR10 & 4K HDMI @60Hz

Screens supporting HDR10 allow HDR-based content to be displayed, resulting in a brighter and more dynamic image. This is further enhanced with support of 4K 60Hz, allowing the presentation of super crisp, fluid video content.

FEATURES

> Signal relay

Our screens have "no signal" protection. If the source is disconnected, the screen will display your personalised banner or will search for any other signal from video sources. Since a blank screen is the worst case scenario for advertising, switching is one of the essential features of our signage screens.

> Screen control

Our integrated SoC (System on a Chip) allows users to control our screens by RS232 link in a local network. You can alter/adjust the volume, activate/deactivate the monitor, schedule the display of content, define an internet link to display or even send a wide choice of commands in real time.

> Pixel Shifting

The Pixel Shifting function can be activated to reduce the potential risk of the image freezing when static content is displayed over long periods of time. The function periodically shifts the image on the screen, without interfering with the viewing experience.

164-7540 High Brightness 75" professional display

> Connection of External Devices

All of our monitors are equipped with HDMI CEC (Consumer Electronics Control) sockets to provide you with maximum convenience when using them. With a single move, you can set up and control your video-conferencing, screen sharing or external PC systems connected to the HDMI port.

> Securing the USB support

A screw-on protective cover (located on the back of the device) protects the USB key, broadcasting content to the screen, from any malicious tampering.

> USB Auto Play

Our integrated SoC gives you the option of activating the USB Auto Play function, allowing you to automatically display photo or video content from your USB drive on the screen with no need to worry about anything else.

> Mini PC format OPS (Open Pluggable Standard)

All products in this series comply with OPS (Open Pluggable Standard). Our OPS (pluggable mini pc) will allow you to optimise your displays with improved processing power and the ability to choose Windows or Android as the operating system to suit your specific application.

> Slim design

The screens in this series have an ultra-slim bezel, leaving plenty of room for the content displayed on the screen to attract the attention of your audience. This series also offers the shallowest depth of all of our Professional Display Solutions.

> SoC content management

Our integrated quad-core SoC has great computing power, giving you faster and more fluid management of the content to be displayed whether it is online or offline.

> Open Platform

Our integrated SoC supports Application Programming Interfaces (API) to allow integrators/ Solution Providers to develop any application based on the HTML 5 data format and easily use them on our screens.

> Screen linking

This monitor can broadcast the content received (to other screens) by using the video inputs/outputs of the screens connected to it. This configuration makes it possible to create a serial connection and to use our monitors as video image walls.

> HDR10 & 4K HDMI @60Hz

Screens supporting HDR10 allow HDR-based content to be displayed, resulting in a brighter and more dynamic image. This is further enhanced with support of 4K 60Hz, allowing the presentation of super crisp, fluid video content.

Dynamic contrast ratio	70000:1		
Display life (min.)	50000 h		
Response time	9.5 ms		
Active area (H x V)	1095.84 mm (H) x 616.41 mm (V)		
Viewing angle	178° Vert., 178° Hor. (89U/89D/89L/89R) @ CR>10		
Colour value	1.07 B (10-bit)		
Screen treatment	3 h		
Haze level	3%		
Refresh rate	60Hz		
Orientation	Landscape / Portrait		
Operation hours	24/7		
Areas of usage	Indoor		
MONITOR CONNECTIVITY		MECHANISM	
RGB input	VGA(DE-15F)	Product dimensions	1121 x 63 x 646 mm
RGB output	N/A	Packaging dimensions	1215 x 165 x 775 mm
Video input	4xHDMI2.0, DP1.2a, 2xUSB2.0, USB2.0(Internal)	Product weight	12.8 kg
Video output	HDMI2.0, DP1.2a	Weight with packaging	16.8 kg
Audio input	Line In L/R	VESA	200 x 200 mm - M6
Audio output	Headphone, Optic SPDIF	Bezel	B:13 T:9 L/R:9 mm
External control	RS232(DE-9F), Ethernet(RJ45), Service(RJ12)		
External Sensor	RJ12		
OPERATING CONDITIONS		POWER	
Temperature conditions	0-40°C	Power supply	110 VAC - 240 VAC - 50/60 Hz
Humidity	10-90%		
ENERGY CONSUMPTION		SPECIFICATIONS	
Typical	128 W	Main specifications	Open Content Management Support, Scheduler, USB Autoplay, Auto-Launch, HDMI-CEC, HDMI-Wakeup, Auto-switch on Failover, Panel Lock, OSD rotation, Nosignalpoweroff, screen saver, pixel shift, scheduler, videowall support, remote control via LAN, real time clock
Deep standby	≤0.5W		Joystick, Rocker Switch, Detachable power cable, Detachable logo, Internal usb cover, 30 degrees tilting installation
ACCESSORIES		Optional features	Embedded IR, IR extender option
Standard	QSG, IB, power cord, remote control, RC Battery, mounting kit, IR extension cable	Speaker	2 x 10 W
		SECURITY	
		Security	Yes
		EMC certification	Yes
		CE mark	Yes

Technical specifications	
Use	24/7
Size	55"
Resolution	4K UHD
Brightness	700 cd/m²
LED technology	Slim DLED
Bezel	B:11 T:9 L/R:9 mm
Depth	63 mm
Vesa	400x400 mm
Portrait mode	Yes
Haze level	1%
Frame	Plastic
Interface	HDMI 2.0/VGA/USB/DP1/RS232/RJ45/ RJ12/HP/Audio/Speaker

55"

24/7

FULL HD

2500 cd/m²

FEATURES

> Ultra high brightness

This monitor has a very high brightness screen of 2500 cd/m², specially developed for public display. It offers a high quality display, no flickering, low radiation which greatly reduces eye fatigue, high brightness and contrast and a wide viewing angle.

> Utilisation

This very robust screen is intended for professional use. With its high brightness, it fits perfectly in a shop window and ensures a perfect readability of the image.

> USB drive with schedule

Equipped with a USB drive, this monitor allows you to plan the distribution of your content. This management is ideal for small businesses.

> Operation Time Support

Professional Panels used with this series are quality confirmed to operate 24 hours a day without any issues. Upon this, the series come with 700 Nits brightness levels suitable for medial indoor environment.
